RKB Baltics: a New Facility, a New Chapter

A transformation journey focused on operational improvement and market expansion.

The RKB Baltics office

RKB Baltics, established 12 years ago, is entering a new stage of development following the strategic transition initiated with the appointment of its Director in July 2024.

The company is currently progressing through a business transformation focused on strengthening key areas of operations, including finance, IT systems, warehouse management, logistics, marketing strategy, customer support, and business development.

In January 2026, RKB Baltics relocated its warehouse and office operations to a new, significantly larger facility. Bringing both functions together under one roof has improved operational efficiency and created additional capacity to support future growth. The warehouse is fully operational, while the office renovation is nearing completion.

For RKB Baltics, the industrial market is primarily driven by sectors such as wood processing, renewable energy, and wind power, with additional opportunities identified in mining and minerals, as well as electric motor manufacturing.

From its base in Giraitė, Kaunas District, Lithuania, the company serves customers across the region, with a particularly strong focus on the Lithuanian industrial sector. Over the past two years, RKB Baltics has developed a deeper understanding of customer requirements through continuous engagement with manufacturers.

RKB Baltics supports customers through technical and commercial services, including bearing selection, application support, troubleshooting and root cause failure analysis (RCFA).

Since the appointment of its current management team, RKB Baltics has continued to expand its customer base and strengthen relationships with industrial partners, reflecting the progress achieved during its transformation phase.

The opening of the new warehouse and office facilities will be marked with a dedicated customer event, providing an opportunity to showcase the company's expanded capabilities and future plans. Looking ahead to 2027, RKB Baltics aims to further develop its team and expand its presence in Latvia and Estonia.
